SXM Sailing will email you a payment link for the remaining balance.

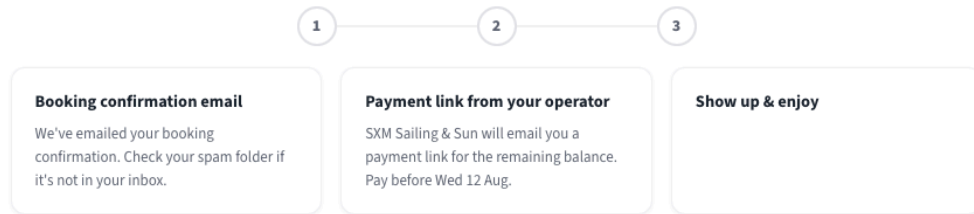

The booking summary on the Thank You page is a bit confusing.

Currently, the operator's information (name, email, and phone) appears first, followed by my information. Instead, I would expect the booking/traveler information (such as the number of travelers, my name, and other booking details) to be displayed first.

If the operator's information is necessary, it would be better to place it in a separate section labeled **"Operator Contact Information"** so it is clearly distinguished from the traveler's booking details.

3. "Show Up & Enjoy" Block

What happens next

Below the booking summary on the Thank You page, there is a “**Show Up & Enjoy**” block that currently appears blank. It should include a short description or helpful instructions for the customer.

4. Booking Issue with Logged-In Users

After purchase is successful, there still show my previous loggedin email. But when I go to my account it will logged out. But if I refress in thank you page it will not logged out or show the new email user to header profile icon.

When I am logged in and book another trip, the checkout form does not automatically populate my existing information.

Additionally, if I enter a different email address during checkout, the system creates a new user account using that email, and the booking is associated with the newly created account instead of my currently logged-in account.

For logged-in users, the booking should always remain associated with the existing account. Alternatively, the email field should be locked or validated to prevent accidental creation of a new account.

There is also another issue after the purchase is completed. The Thank You page still displays my previously logged-in email, making it appear that I am still logged into my original account. However, when I navigate to **My Account**, I am actually logged out. But if I check the header profile icon, it will show the previous account email and name. But the trip is created in a new email and user.

Tripwheel Testing by Admin

1. Custom Code Option

The **Custom JavaScript** option is not working.

For example, the following script does not execute when added through the custom code option:

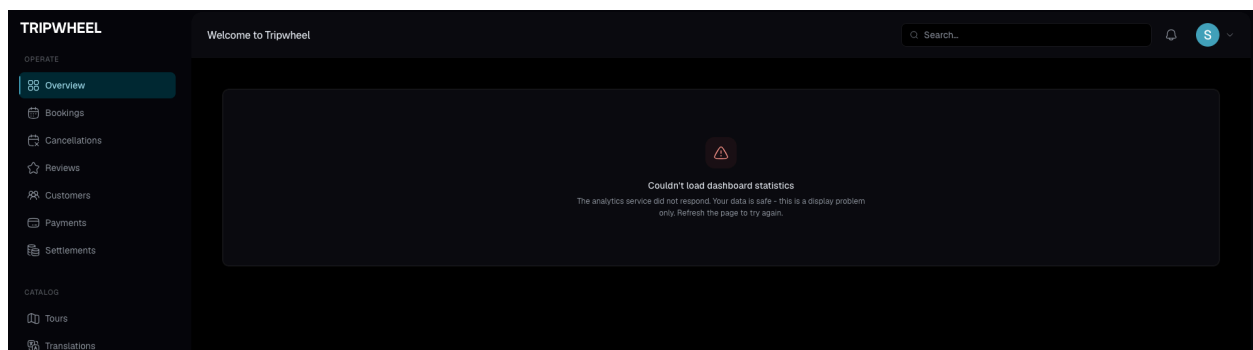

```
<script>
  document.querySelector("input[placeholder='Which Island?']").placeholder = "hello";
</script>
```

However, if I run the exact same code directly in the browser console, it works as expected.

2. Operations Manager Dashboard Error

I was invited as an **Operations Manager** using an email address and successfully logged in.

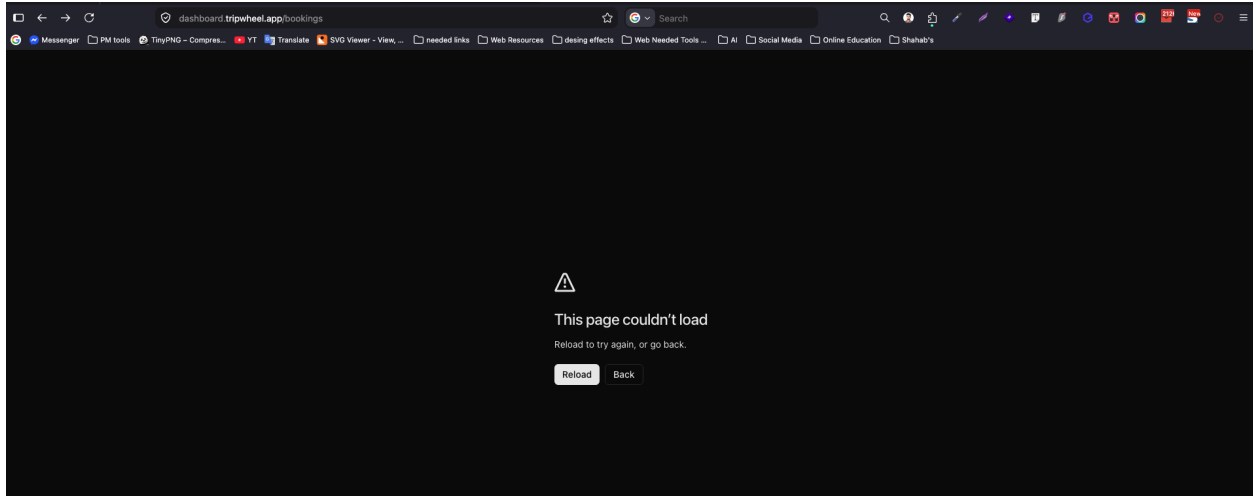

However, when I open the **Overview** page in the dashboard, I immediately see an error. Is this due to a permission restriction, or is it an actual system error?

3. Booking Details Error

As an **Operations Manager**, I can view the list of bookings.

However, when I click **View Details** for any booking, an error is displayed instead of the booking information.

4. Missing Data in Operations Manager Dashboard

When logged in as an **Operations Manager**, the following dashboard sections do not display any data:

- Cancellations
- Reviews
- Customers
- Payments
- Settlements
- Tours
- Translations

Please confirm whether this is expected because of role permissions or if these sections are not functioning correctly.
