

TripWheel Testing

1.

On the tour attributes / configuration page, under the "Local Payments" section, the "Tier" dropdown field renders the raw i18n translation key ("general.tier") instead of a proper placeholder or the actual selected tier name. This indicates a missing or broken translation binding for that field.

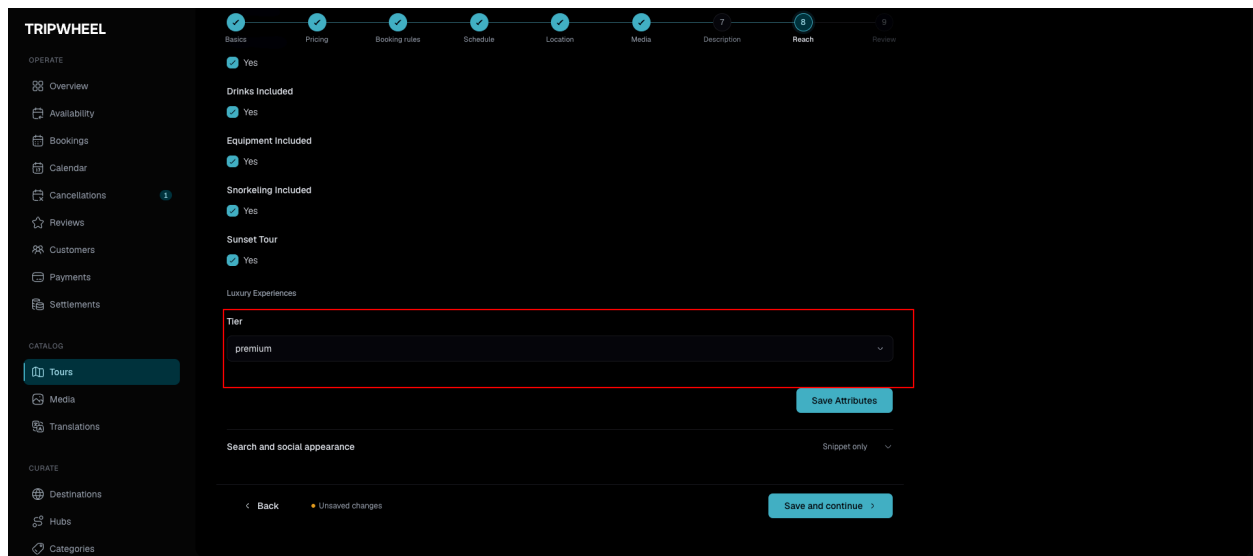

STEPS TO REPRODUCE

1. Log in with an Admin or Operator account.
2. Navigate to a Tour's edit page and open the attribute / configuration section.
3. Scroll down to the "Local Payments" block.
4. Observe the "Tier" dropdown field.

EXPECTED VS ACTUAL RESULT

Expected: The field should show a human-readable placeholder (e.g. "Select tier") or the actual name of the selected tier.

Actual: The field displays the literal, untranslated key "general.tier", exposing internal code to the end user.

2.

From the Customers list, attempting to delete a customer record is not permitted, even when the acting account holds Admin-level

access that should include this capability. No delete option is available, or the action is rejected without a clear reason.

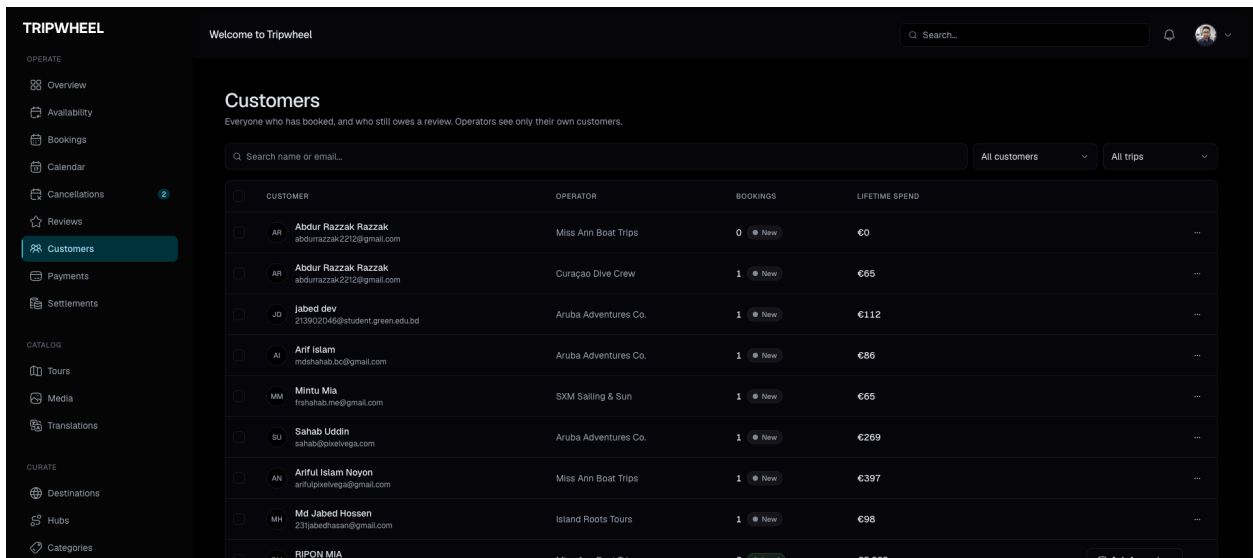

STEPS TO REPRODUCE

1. Log in with an Admin account.
2. Navigate to Operate → Customers.
3. Select any customer record from the list.
4. Attempt to delete the customer.

EXPECTED VS ACTUAL RESULT

Expected: An Admin account should be able to delete a customer record, or, if deletion is intentionally restricted for data-integrity reasons, the UI should clearly explain why and offer an alternative (e.g. "Deactivate").

Actual: The delete action is not allowed for the Admin account; no explanatory message is shown to clarify the restriction.

3.

On the Payments page, applying a custom date range filter (e.g. 28 Jul – 02 Aug) does not correctly restrict the results. Transactions dated well outside the selected range (e.g. 19–21 Aug) still appear in the filtered list, which will lead to incorrect reconciliation and reporting.

STEPS TO REPRODUCE

1. Log in with an Admin account.

2. Navigate to Operate → Payments.
3. Set the date range filter to "28 Jul 2026 - 02 Aug 2026".
4. Review the resulting transaction list and compare each row's date against the filter range.

EXPECTED VS ACTUAL RESULT

Expected: Only payments with a transaction date falling inside the selected range (28 Jul - 02 Aug) should be displayed.

Actual: Payments dated outside the range (e.g. 19, 20 and 21 Aug) are still shown in the results.

TESTING STATUS & OPEN CLARIFICATIONS

Coverage so far: Approximately 30% of the Admin Dashboard has been tested as of today (01 August 2026). Testing is ongoing and this report will be updated as more modules are covered.

Pending clarification: Some items below (e.g. BUG-002) are flagged as suspected issues but need to be discussed with Ripon Bhai to confirm whether they are actual bugs or intended behaviour. In addition, a few other areas of the dashboard outside these listed bugs also seemed off during testing; these will be clarified after discussion with Ripon Bhai and added to this report if confirmed.
